

DECLARATION

The Compost Tea Percolator is the only apparatus known to this inventor that uses air power to facilitate water circulation in the production of compost tea.

The compost tea percolator's application is associated with foliar and soil applications of nutrient and microorganism rich solutions. These solutions are created by extracting soil microbes and nutrients into a tank of aerified solution. This solution may be enhanced by adding nutrients and other additives to boost microbe population or nutrient values.

The compost tea percolator is invented by

Theodore C. Huhn

2819 Blue Ball Road

Elkton, MD 21921 USA
